

IRIIS offers a full range of products and services unmatched by our competitors. Our primary focus revolves around working hand in hand with our clients to plan and execute tailor-made inspection solutions and service offerings for both land and offshore drilling, Marine Support Vessels and production facilities. This approach enables us to offer turn key solutions to the challenges faced in nearly every sector of the oil and gas industry.

IRIIS, LLC

IRIIS is committed to providing the best possible service to our clients in the oil and gas industry on a global scale.

We work closely with our clients to tailor solutions that fit their specific needs and then follow through by assisting in the implementation of these solutions.

World Class Delivery Solutions

IRIIS

IRIIS, LLC

IRIIS, LLC provides technical support and solutions for land and offshore drilling and production facilities on a global scale. Our Advisors are highly skilled with extensive experience in the Oil & Gas Industry. Our unique system emphasizes our willingness to create custom client specific solutions. We provide full disclosure of our findings through very detailed daily reports. Once issues are identified we make recommendations to properly address any problems while improving efficiency and driving down cost.

Whether you are looking for solutions from land rigs to ultra deep water advanced drill ships, from pipelines to production platforms, we can supply professionals to take ownership of your project and ensure the job is completed to your satisfaction. For additional information on the full range of services we provide, or to discuss any project, please contact a member of our management team:

INSPECTIONS

We offer a broad range of inspection-based services, including limited and full condition inspections of Land and offshore drilling and production facilities, commissioning programs tailored to your project, Certified OVID inspections, final acceptance trials, and a full range of dropped object hazard assessments (DOH). Our inspection professionals have represented clients, and prepared for, literally hundreds of regulatory and classification society inspections. We know what the inspectors are looking for, and we help correct issues that may be a problem before they become a problem.

Rig selection report

RIG SELECTION SURVEYS

When you have a choice of which rig to choose, you want the best option for the best price. IRIIS provides a rig selection service that combines multiple surveys into one comprehensive report that includes operational readiness, asset integrity, regulatory compliance, safety, risks, hazards and commercial potential. This service was specifically designed for and offered to clients that want functional validation of an asset. This can be a rig fresh out of Construction, one that has spent years in operation or a rig that has been stacked and is being considered for a project. IRIIS will comprehensively validate the fit-for-duty functionality of your asset.

DROPPED OBJECT HAZARD (DOH) ASSESSMENT

Using industry standard practices for dropped objects prevention, we provide inspection services, train rig personnel and can assist you in creating a custom solution for your specific needs. IRIIS developed a software application for collection and reporting of DROPS inspections. This application was developed in house and provides accurate detailed reports while reducing the time it takes to collect the information and complete the final detailed report and a failure report.
